PERSONAL PROJECTS

• Chatfusion 🗑️ 🔄	Solo Project / December 2025
Next.js, Socket.IO, ShadcnUI, Supabase, WebRTC, Redis, Prisma ORM, Zustand, TanStack Query	
– Engineered real-time communication using Socket.IO for messaging, typing indicators, and presence tracking, replacing Supabase Realtime and reducing call notification latency from 2s polling to under 100ms.	
– Built P2P video calling with WebRTC (DTLS/SRTP encryption, screen sharing), Redis TTL-based presence (30s heartbeat, 60s expiry), and Redis rate limiting (10 msg/60s) to handle concurrent users efficiently.	
– Architected a service layer with Prisma ORM across 6+ modules for type-safe PostgreSQL access, secured routes via Next.js middleware and Supabase RLS policies, and containerized the full stack with multi-stage Docker build deployed on Render.	
• BarsVsBars 🔄	Team Project / June 2025
MongoDB, Express.js, React.js, Node.js, Tailwind CSS, ShadcnUI, Cloudinary, JWT, Socket.io	
– Developed a full-stack MERN web application for one-on-one rap battles, adding 3 core features — track uploads, real-time voting with Socket.IO, and public commenting — to improve user engagement and interaction.	
– Built a responsive, component-driven frontend using React.js, Tailwind CSS, and ShadcnUI; integrated Cloudinary for media storage and JWT-based authentication for secure user sessions.	
– Designed and implemented email-based OTP verification with Nodemailer for user registration, strengthening account security and reducing fake sign-ups.
